RESEARCH INTERESTS

I am broadly interested in the effect of social context and social identity in belief in and sharing of political (mis)information. My dissertation focuses on the duality of partisan identity bias and rationality in belief in political (mis)information. I take a multi-level approach to address these questions by blending theory and methods from social psychology, social cognition, and computational social science. I have conducted research using surveys, behavioral experiments, Twitter and Facebook data, and fMRI (and am in the planning stage of a project that will utilize Bayesian modeling).

KEYWORDS: Social identity; (mis)information; belief; sharing information; partisanship; bias
